Feedback from an implementation for stellar libraries.

Carlos Rodrigo Blanco^{1,2}
Enrique Solano^{1,2}

¹CAB,INTA-CSIC

²Spanish Virtual Observatory

Asterics Tech Forum 4
Edinburgh, April 2018

- Collections of spectra
 - object properties, classification.
 - spectrum.
 - additional files.
 - observation data.
 - spectra in different formats/resolutions.
 - auxiliary spectra.
 - model fit results, analysis...
- Usually served as web pages.
 - Designed to offer everything together, linking different files.
- How to do a similar thing in the VO?
 - CS, SSAP + Datalink?

International Workshop on Spectral Stellar Libraries

	Monday	Tuesday	Wednesday	Thursday	Friday
09:00-09:30	Opening			David Montes	Claus Leitherer
09:30-10:00	Cristina Chiappini	Paula Jofre	Eswar Reddy	Anke Arentsen	Gustavo Bruzual
10:00-10:30					
10:30-11:00	Coffee-break			Coffee-break and posters	
11:00-11:30		Nicolas Lodieu	Bruno Dias	Renbin Yan	Natacha Zanon
11:30-12:00	Analys Gonneau	Riano E. Giribaldi	Round-table "What does the VO do for us?", chair P. Prugniel	Yue WU	Luis Gabriel Dahmer Hahn
12:00-12:30	Clare Worley	Rodolfo Smiljanic		Ranjan Gupta	Closing
12:30-14:30			Lunch		
14:30-15:00	Reynier Peletier	Petr Skoda	Free-afternoon	Alberto Krone-Martins	Bus leaving Orotour to GRU
15:00-15:30				Adam Burgasser (Jupyter notebook and github link)	
15:30-16:00	Alexa Villaume	Philippe Prugniel		Elizabeth Griffin	
16:00-16:30	Andre Milone	Carlos Rodrigo			Coffee-break
16:30-17:00		Coffee-break			

Commission G5 WG Stellar Spectral Libraries

Description

Libraries of stellar spectra (SSL) are at the crossroad of different fields of astrophysics. In particular, they serve as reference for the analysis of large spectroscopic surveys, and they are fundamental ingredients of the models of stellar populations used to study galaxies. These libraries may either consist of observed or theoretical spectra, and they vary by their spectral coverage/domain and resolution.

The goals of the WG are to identify the scientific and technical issues linked with SSL, in particular:

- The coverage in wavelength and parameter space of the current and scheduled libraries
- The dissemination of the libraries and their accurate description
- The characterization of the stars

A particular concern is that despite continuous progress on all aspects of SSL, considerable disagreements on the atmospheric parameters and chemical abundances of stars, and on the ages, metallicities of masses of galaxies, persist for decades. Whereas the internal precision these parameters is of the order of 0.02 or 0.03 dex, the actual accuracy is not better than 0.2 dex.

A number of projects faced these issues whose origins are complex, like for example the GAIA Benchmark Stars, a small library of primary calibrators, and the GAIA-ESO Survey. Even for the best studied stars, different approaches do not agree. These uncertainties on the stellar parameters further propagates to the stellar population models, adding up with our limited knowledge of the stellar evolution, contribution of binary stars, and other interpolation of tricky mathematical questions.

The WG will carry-on an inventory of the different attempts made to explain the discrepancies, and will summarize recommendations for actions that would improve the situation.

A report will be prepared before the next IAU GA in 2018.

Search Scientific Bodies

Follow the IAU on social media

IAU General Assembly 2018

- Standardization is important.
 - VO: same formats, access protocols...
- One single service for “everything together”.
 - Not implementing different services for the catalogue, the spectra, the related images...
- Improvements in protocols and applications for spectra.
- Work in progress: meeting in Beijing next week.

Stellar libraries: SVOCat

Stellar Spectral Libraries

CaT. Empirical Calibration of the Near-IR Ca II Triplet

The project is dedicated to the empirical calibration of the Ca II triplet and stellar population synthesis modelling. For this purpose, we make use of a new stellar library of 706 stars in the near-IR spectral range (from 8348 Å to 9020 Å with a FWHM of 1.5 Å) which spans a wide range of updated atmospheric parameters.

(More info)

L and T dwarfs (Chiu et al. 2006)

L and T dwarf data archive from Chiu et al. 2006, Golimowski et al. 2004 and Knapp et al. 2004.

(More info)

STELIB.

The objective of the STELIB Stellar Library is to build an homogeneous library of stellar spectra in the visible range (3200 to 9500Å), including stars of all spectral types, luminosity classes and metallicity that can be observed from the ground with the current instrumentation.

(More info)

X-Shooter Spectral Library

The X-Shooter Spectral Library is a collection of 3000–25000 Å all stellar spectra observed at a resolving power of $R = \lambda/\Delta\lambda \sim 10,000$ with the medium-resolution spectrograph X-Shooter at the Very Large Telescope (VLT).

(More info)

FGKM stellar Library, Yee et al. 2017

Precision Stellar Characterization of FGKM Stars using an Empirical Spectral Library.

(More info)

MILES stellar library

The MILES stellar library consist of ~1000 stars spanning a large range in atmospheric parameters. The spectra were obtained at the 2.5m INT telescope and cover the range 3255–7500Å at 2.50Å (FWHM) spectral resolution.

(More info)

The NIRSPEC Brown Dwarf Spectroscopic Survey. Low-Resolution Data.

The Brown Dwarf Spectroscopic Survey (BDSS) is designed to study near-infrared moderate-to-high resolution spectra for a large sample of low-mass stars and sub-stellar mass objects in the M and newly defined L and T dwarf classes.

(More info)

Gaia FGK Benchmark Stars

The Gaia FGK Benchmark Stars are a common set of calibration stars, covering different regions of the HR diagram and spanning a wide range in metallicity. It is a homogeneous library in the visual range (480–680 nm) of high resolution and signal to noise ratio (S/N) spectra corresponding to the 34 Benchmark Stars and 5 metal-poor candidates.

(More info)

SpeX Prism Library

This site is build as a basis to provide Virtual Observatory access to the published spectra in the SpeX Prism Library.

(More info)

UVES/VLT M subdwarfs

This library presents UVES/VLT high resolution spectra of three late-K subdwarfs and 18 M subdwarfs. Our atlas covers the optical region from 6400Å up to the near infrared at 8900Å. We show spectral details of cool atmospheres at very high resolution ($R=40000$).

(More info)

If you use this service in your research, please include the following acknowledgement in any resulting publications:

"Based on data from the Spectral Stellar Libraries services developed by the Spanish Virtual Observatory in the framework of the IAU Comission G5 Working Group : Spectral Stellar Libraries".

This screenshot shows the Aladin v10.0 software interface. The main window displays a star map centered on the Southern Cross constellation. A context menu is open over a star in the center. The top menu bar includes File, Interop, and Help. The toolbar contains icons for various data sources like DSS, SDSS, 2MASS, WISE, GALEX, PLANCK, AKARI, XMM, Fermi, Gaia, Simbad, NED, and avo.cat/cat/miles+. The bottom status bar shows coordinates (20:25:50.24640 +15:11:01), epoch (17:44:08.70), and other parameters (51:59:02.6, 180° × 85.47°). The left panel lists "GBS" spectra data, and the right panel shows a zoomed-in view of the star map with selection and measurement tools.

DataLink Semantics

Datalink core ontology

This is the description of the namespace <http://www.ivoa.net/rdf/datalink/core/core> as of 2014-10-30.

Terms in this vocabulary are intended for use in the semantics column in the output from the DataLink-1.0 {links} capability. The terms here describe the relationship of the linked resource to the thing identified by the input ID value(s) and ID field in the record.

As specified in DataLink-1.0, terms from the vocabulary may be used in the DataLink output using only the fragment (e.g. #word) form (since this is the core vocabulary). We use this form below as the short form of the equivalent fully qualified term (e.g. <http://www.ivoa.net/rdf/datalink/core#word>).

Alternate formats: [RDF](#) [TTL](#)

Predicate	Parent	Label	Comment
#this		the data itself	the primary (as opposed to related) data of the identified resource
#progenitor		Progenitor	data resources that were used to create this dataset (e.g. input raw data)
#derivation		Derivation	data resources that are derived from this dataset (e.g. output data products)
#auxiliary		Auxiliary	auxiliary resources
#weight	#auxiliary	Weight map	resource with array(s) containing weighting values
#error	#auxiliary	Error map	resource with array(s) containing error values
#noise	#auxiliary	Noise map	resource with array(s) containing noise values
#calibration		Calibration data	resource used to calibrate the primary data
#bias	#calibration	Bias calibration data	used to subtract the detector offset level
#dark	#calibration	Dark calibration data	used to subtract the accumulated detector dark current
#flat	#calibration	Flat field calibration data	data used to calibrate variations in detector sensitivity
#preview		Preview	low fidelity but easily viewed representation of the data
#preview-image	#preview	Image preview	preview of the data as a 2-dimensional image
#preview-plot	#preview	Plot preview	preview of the data as a plot (e.g. spectrum or light-curve)
#proc		Processing	server-side data processing result
#cutout	#proc	Cutout	a subsection of the primary data

DataLink Semantics

Datalink core ontology

This is the description of the namespace <http://www.ivoa.net/rdf/datalink/core/core> as of 2014-10-30.

Terms in this vocabulary are intended for use in the semantics column in the output from the DataLink-1.0 {links} capability. The terms here describe the relationship of the linked resource to the thing identified by the input ID value(s) and ID field in the record.

As specified in DataLink-1.0, terms from the vocabulary are intended for use in the semantics column in the output from the DataLink-1.0 {links} capability. We use this form below as the short form.
